Personal Profile Map

A Polyvagal-informed Tool to Help Clients Explore & Befriend Their States

Featuring: Deb Dana, LCSW

Practical and engaging printable tool to use with your clients!

A Quick Guide to Completing the Personal Profile Map

The Personal Profile Map is the foundational autonomic map answering the question, "Where am I?" This map helps clients safely connect to, and get to know, their experiences in each of the three autonomic states. The mapping process naturally energizes the system. Help your clients 'dip a toe' into sympathetic and dorsal in order to befriend these states and not be hijacked by them and savor their exploration of ventral. Remember, although clients create their own individual maps, the mapping process is a dyadic experience. Accompany your client on their mapmaking journey and bring your co-regulating energy to support their safe engagement in the process.

Mapping Directions

While this map can be done in pen or pencil, there is an added benefit to completing the map in color. If you decide to use color, ask your clients to choose colored markers that represent each of their autonomic states.

Polyvagal-informed exercises support clients in exploring their states, moving between states, and follow the rule, "Always end in ventral". In this mapping exercise, travel the predictable pathway down the hierarchy and first map the sympathetic state, then move to dorsal vagal, and end by mapping the ventral vagal state of regulation.

Ask your client to remember a time when they felt a sense of sympathetic activation and let a bit of that into their mind and body - just enough to get a flavor of it. In the sympathetic section of the ladder map have them write what it feels like, looks like, sounds like. What happens in their body? What do they do? What do they feel? What do they think and say? Ask how sleep, their relationship with food, and use of substances or compulsive behaviors is impacted. As they finish the section, ask them to fill in the sentences "I am..." and "The world is..." These two sentences identify the core beliefs at work in the state.

Repeat this process with the dorsal vagal state. Mapping dorsal vagal can easily activate the energy of collapse and disconnection. Use your ventral vagal co-regulating capacities to support your client and help them connect with just enough of their dorsal state to begin to map it.

Finish by mapping the ventral vagal state. For this section help your client bring the state fully alive. Some clients have a difficult time believing they have access to this state or think they are damaged and their ventral vagal system is broken. If a client struggles to connect to their ventral state, look for moments in the therapeutic relationship, connection with a pet, or time spent in nature. A micro-moment of ventral regulation is enough to bring the state alive and map it.

While ventral, sympathetic, and dorsal are important terms to know, clients may find these names are not how they want to refer to their states. With their map completed, invite your clients to use the boxes along the side of the map to give each of their states a name that reflects their personal experience.

End by exploring the map with your client. Listen to their sympathetic and dorsal experiences and finish the exercise by anchoring in the experiences of the ventral vagal system.

Deb Dana, LCSW

Deb Dana, LCSW is a clinician and consultant specializing in working with complex trauma. She is a consultant to the Traumatic Stress Research Consortium in the Kinsey Institute and clinical advisor to Khiron Clinics. She developed the Rhythm of Regulation Clinical Training Series and lectures internationally on ways Polyvagal Theory informs work with trauma survivors. Deb is the author of *The Polyvagal Theory in Therapy: Engaging the Rhythm of Regulation, Polyvagal Exercises for Safety and Connection: 50 Client-Centered*

Practices, co-editor with Stephen Porges of Clinical Applications of the Polyvagal Theory: The Emergence of Polyvagal-Informed Therapies, and creator of the Polyvagal Flip Chart. rhythmofregulation.com

Build a Foundation of Trust & Safety with Clients to Improve Clinical Outcomes

Join leaders in the field of Polyvagal Theory for two days of insightful conversations, eye-opening presentations, continuing education, and so much more at the **Polyvagal Institute's Annual Conference: The Many Voices of Polyvagal Theory!** At this premier virtual 2-day event on November 5 & 6 you'll hear from Stephen Porges, Deb Dana, Arielle Schwartz, Mona Delahooke, Les Aria and others as they reveal today's leading-edge research on PVT. You'll get guidance on how to use it in your practice so you can help clients process trauma memories, regulate emotions, and move beyond cycles of avoidance and re-traumatization.
